

## Final Project Milestone 2

My schema is titled “animal\_crossing” with table names: users, user\_villager, and villagers.

user_id	email
1	alee5@oxy.edu

user_id	villager_id
1	50
1	66
2	9

villager_id	name	birthday	zodiac	personality	species	hobbies	themes	color	image
1	Cyrano	2019-03-09 00:00:00	Null	Cranky	Anteater	Education	Eyebrows	Blue	<a href="https://acnhapi.com/v1/images/villagers/1">https://acnhapi.com/v1/images/villagers/1</a>

GET/POST request query examples:

1. GET <https://localhost:3000/personalities>
2. GET <https://localhost:3000/species>

3. GET <https://localhost:3000/colors>
4. GET <https://localhost:3000/hobbies>
5. GET <https://localhost:3000/themes>
6. GET <https://localhost:3000/species/Gorilla>
7. GET <https://localhost:3000/theme/Karen>
8. GET <https://localhost:3000/color/white>
9. POST <https://localhost:3000/newuser>
  - a. {“email” : “alee5@oxy.edu” }
  - b. Using OAuth2 for user to sign in through Google log in
